

LOCATAPRO

Enhancements

Tailor your housing options services with precision

Locata has developed a modular approach for the delivery of its systems in order to offer highly flexible and cost effective development options.

Highly flexible development

Many of our customers start with an entry level set of modules called Locata Pro. This is designed to be the core of your housing register system and covers online customer application, management of the ongoing registrations and a bidding and lettings process that your customers can interact with.

Individual Locata Pro Modules can then be added that integrate seamlessly with your existing Locata system to provide your staff and customers with more specific and upgraded services.

Finally, our Enhancements allow precisely defined adaptations to specific systems and modules to deliver additional services and functionality tailored to the needs of the individual scheme.

Locata's modular approach also allows for extremely competitive pricing as existing systems are easily augmented by simply plugging in a new module or enhancement.

The Locata Pro Enhancements

Locata Pro Enhancements are tailored augmentations that can be added to existing Locata Pro systems and modules in order to deliver additional functionality.

Many of our clients have requested particular enhancements in the past in order to dovetail their systems even more precisely to their own local needs. Over time this has led to the creation of a bank of more than 130 enhancements that can be bought “off the shelf” very cost effectively.

Alternatively, existing enhancements can be adapted quickly and smoothly to match slightly different local needs and requirements. However, if you do have a requirement that cannot be satisfied by any our existing enhancements, we can discuss creating your own new tailored enhancement.

The Locata Pro Enhancements are offered as a shopping list of system and module additions that allows you to select the specific increased functionality that meets your particular requirements as you continue to refine and develop your Locata Pro Housing System.

Save time and money

Locata Pro Enhancements allow you to define specific elements of your own scheme cost effectively and with complete flexibility. They ensure that there is a continuous focused improvement to your scheme's system and help deliver digital-by-default services to your customers.

- ✔ Save money – pick from our wide range of existing enhancements

- ✔ Save resources – reconfigure a current enhancement
- ✔ Save time – fast and seamless delivery and implementation

Enhancements can be added simply and cheaply to your Locata Pro system in line with your local needs. You decide the direction in which you wish to develop your services at a speed that suits both your team and your customers.

Plug in to digital-by-default

You can add individual Enhancements or a number of them simultaneously to finesse your increasingly sophisticated digital-by-default Housing Options system at a pace that suits your local needs and budget.

Our Enhancements are created individually, but can be used with any other part of the Locata Pro system. We do this by delivering small, reusable and easily deployable Enhancements that each exploit a robust and well-defined interface to our Locata Pro systems and modules.

This allows us to offer extremely competitive pricing with shorter delivery windows as Enhancements simply plug into your existing system and can be readily customised to your own requirements.

We have more than 130 Enhancements that have been developed in partnership with schemes using Locata systems. They can be deployed with your Locata Pro and Locata Pro Plus systems and modules to help deliver a tailored service to your customers that reflects your policy and local housing needs.

The list below gives a taste of the range of Enhancements available, but please contact us direct for a full list of current Locata Pro Enhancements available to be configured to your requirements or in development
